

Build A HTML Only Landing Page (15 Points)

Due Date: 7th September, 2022 23:59:59

The Brief

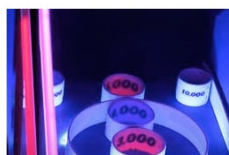

1. Your challenge is to build out the HTML structure and content of this landing page.

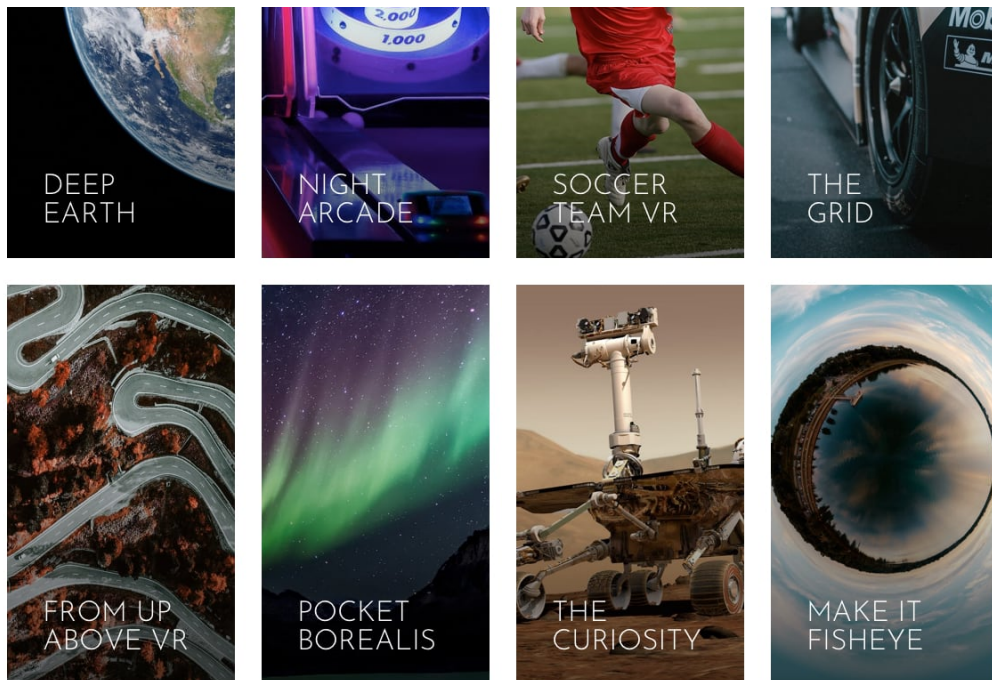

THE LEADER IN INTERACTIVE VR

Founded in 2011, Loopstudios has been producing world-class virtual reality projects for some of the best companies around the globe. Our award-winning creations have transformed businesses through digital experiences that bind to their brand.

2. You should named your HTML document as **index.html** in "loopstudios-landing-page-project" folder.

3. You are expected to use structure and semantic elements to properly markup your page.

So your HTML markup should contain at least these structure elements:

- **header** element
- **nav** element
- **main** element
- **footer** element

4. All the images and icons, are put in the **images** and **icons** folders respectively inside **assets** folder. The logo is also found in the assets folder too.

You should maintain this organization and reference all the images, icons and the logo accordingly.
